An opportunity to get your share of this business—  
Your share of these profits

TERRY PENFILLER CO.

JANESVILLE, WISCONSIN

## WHY the TERRY PENFILLER

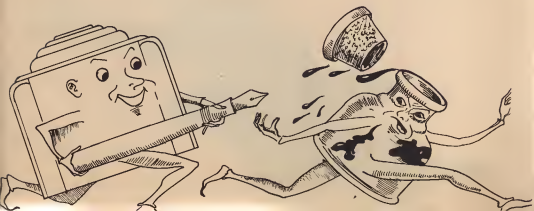

Ever since fountain pens were invented— inventors have tried ways and means to make them "mess-proof"—convenient to fill. They tried to make the filling mechanism make up for the inadequacy of the ink supply. No matter how perfect the pen filling mechanism—it still had to be immersed in ink. The ink had to go somewhere—so it usually went wherever ink likes to go, over fingers, desks, papers, etc. Hence Mr. Terry put the ink under control—made the inkwell prevent its own mess.

## THE WHY OF TRANSPARENT FOUNTAIN PENS

Transparent fountain pens were invented because pen owners have long complained about pens running dry. Just analyse this! Pens run dry because no one would think of filling a fountain pen until it was absolutely necessary—pen filling was such an annoyance. So pen makers made transparent pens—in order that pen users might see that the pen *had* to be refilled before the pen ran completely dry.

While transparent pen barrels show when the pen is empty they do nothing about the mess of pen filling. Only a Terry Penfiller attacks the real problem. It makes fountain pen filling so easy, quick, clean and simple that any pen owner is glad to fill his pen the Terry way every day or two with clean fresh ink—have a full clean pen all the time without thinking about it—and a better writing pen because its ink channels are vacuum cleaned with each Terry filling.

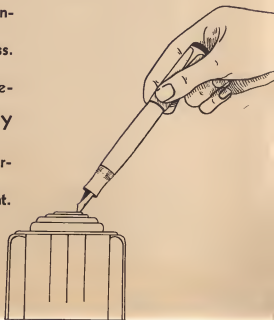

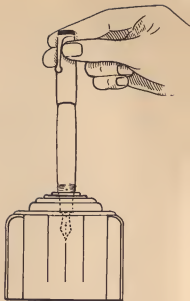

## PUTTING INK UNDER CONTROL

Altho literally thousands of inventors have tried to control the flow of ink from the inkwell to the fountain pen — every gadget attempted did not stop ink from getting all over the shank of the pen, or prevented ink from spilling.

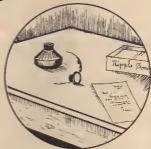

## AT LAST THE ANSWER

So the TERRY PENFILLER was perfected. After years of careful development—rigorous tests—time tried in the field. The public soon learned the TERRY PENFILLER does for the pen what no pen mechanism could—fills fountain pens instantly without mess. Soil-proof, ink-proof, trouble-proof, mess-proof. The TERRY PENFILLER makes what was formerly an annoyance a mere incident.

## OTHERS TRIED EVERY OTHER WAY

From the lowly eye-dropper to the self-filling sac type pen was but the beginning of pumps, plungers and vacuums. ALL to avoid mess—to simplify filling. But—pens still had to be “dunked,” *immersed in ink*. Open ink-wells—uncapping—uncorking—rolling corks—soiled hands—wiping cloths, blotters, etc. not to mention wasted time.

## SAC TYPE PENS

Sac type pens are filled without the use of their own mechanism. Just a simple light pressure. A downward stroke of about one quarter inch. Release, and the TERRY PENFILLER does the rest. Fills it more completely than the pen's own mechanism. Eliminates sucking in of air, prevents a higher pressure of air above the ink eliminating leaking and blotting at first writing. Fills at atmospheric pressure only. Vacuum cleans and flushes the nib — all at the same time. Keeps the pen in perfect writing condition.

NOT  
PARTIAL,  
LIKE THIS

BUT —  
COMPLETE  
COLLAPSE,  
LIKE THIS

## VACUUM TYPE PENS

Sacless or Vacuum type pens are also filled without the use of their own mechanism, requiring only three to four light strokes to fill with the TERRY PENFILLER. Filling more quickly, conveniently and cleanly. Vacuum cleans and flushes the pen. Avoids spilling ink.

ONLY 3 TO 4  
GENTLE STROKES  
TO FILL  
VACUUM TYPE PENS

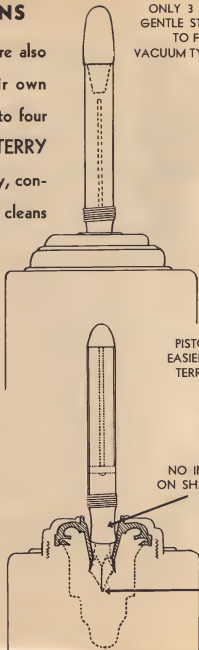

## OTHER TYPES

Piston, plunger type pens require the use of the pen mechanism. But—only the TERRY PENFILLER keeps the ink away from the pen shank—eliminates "dunking"—protects the pen point from injury, and avoids spilling ink.

PISTON TYPE  
EASIER TO FILL  
TERRY WAY

NO INK  
ON SHANK

PEN POINT  
FULLY  
PROTECTED

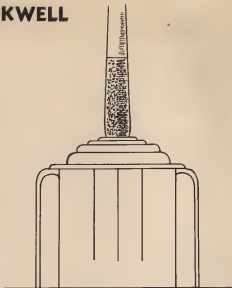

## PLUS THE PERFECT INKWELL

For decades of time  
Inventors have tried to make  
the perfect Inkwell  
They made them self closing  
after a fashion  
They made them dustproof  
after a fashion  
They made them non-spurting  
after a fashion  
They made them non-  
evaporating  
after a fashion.

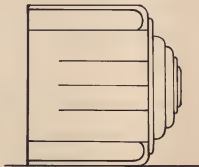

### BUT

they did not make them spill-  
proof  
they did not make them *fully*  
spurt-proof— dust proof  
they did not make them seal  
with the pen *in* as well as  
with the pen *out*.

The TERRY PENFILLER does  
everything claimed by any  
other and everything no other  
inkwell does  
Pays for itself in ink saving  
and pen repairs.

BEST FOR ANY PEN

WILL NOT SPILL IF  
MOMENTARILY UPSET

## THE PERFECT INKWELL

Spill proof

doubly self-sealing

"seals with the pen in  
seals with the pen out"

non-evaporating

dust-proof

spurt proof

durable

economical

attractive

and

fills fountain pens

quickly

and without mess.

Keeps them working perfectly.

Keeps ink under control.

Pays its own way.

PREVENTS DRIBBLING

SEALS WITH  
THE PEN OUT

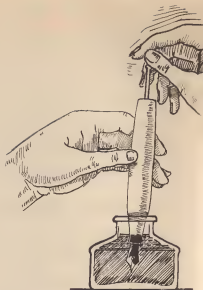

PREVENTS EVAPORATION

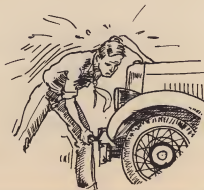

## DOUBLY PROFITABLE

The Terry Penfiller is to the fountain pen what the self-starter was to the automobile — press the button and presto, what was a revolting task becomes a mere incident. Just as the self-starter multiplied the acceptance and sales of automobiles, so the Terry Penfiller expands the market for fountain pens. The more convenient fountain pens are made to fill, the more they will be used — many people refuse to carry fountain pens because they are so messy. Fountain pens have yet to reach anything like their potential sales possibilities. All they need is the self-starter convenience — easy, quick, clean filling — without effort, annoyance or mess, the Terry Penfiller way. It is the final necessary convenience to bring fountain pens into universal use. Fountain pens help sell Terry Penfillers. Terry Penfillers help sell fountain pens. The Terry Penfiller is a double action profit builder.

*The Terry Penfiller will increase fountain pen use (and, therefore, sales) just as the self starter did for automobiles. It is the final necessary convenience which brings universal use and multi-million sales.*

*"Hand Cranking" with its mess and bother limits the sale of fountain pens just as it limited the sale of automobiles.*

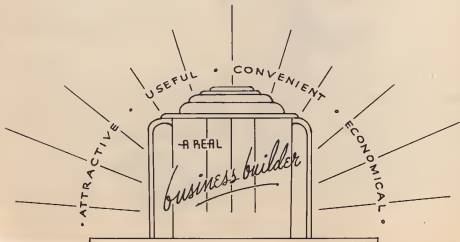

## A REAL BUSINESS BUILDER

The TERRY PENFILLER is priced to make you a worthwhile margin, permit of national advertising and give the consumer more for his money than he can obtain from any other inkwell irrespective of price or features. It is the kind of a device your customers will thank you for selling them every time they use it—a good-will builder.

The TERRY PENFILLER is a device one user tells another about—a sales builder. The kind of a device you take pride in selling—an enthusiasm sustainer.

The TERRY PENFILLER is a device that has everything—eye attractiveness—usefulness—economy—convenience—the elimination of all annoyances and messiness of ink getting where it shouldn't. Making fountain pens more convenient to use, easier to sell, saleable in greater volume.

## FULLY GUARANTEED

Made to serve a lifetime of convenience. There are no pistons, plungers or working parts to wear out or get out of order. The diaphragm of a new specially treated ink resistant rubber has a life of twenty years. All working parts of the Terry Penfiller have been subjected to rigorous tests that indicate an unlimited service in normal use. It is fully guaranteed as indicated below.

### - Guarantee -

The TERRY PENFILLER is fully guaranteed for the period of one year from date of purchase against all defects in material and workmanship.

No attempt has been made to show complete lists of either Terry Penfiller dealers or large users. Supplementary lists are issued frequently which in themselves indicate the sweeping success of the Terry Penfiller, but it is obviously impossible to keep these lists even relatively complete or up-to-date.

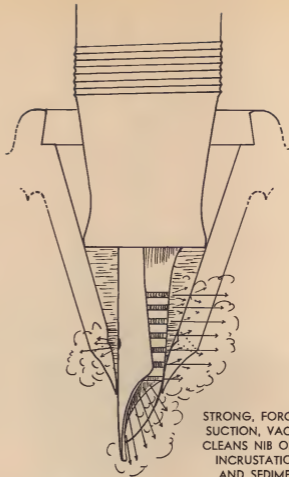

FIRST — Pen Seated in Penfiller.

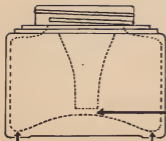

SECOND — Compression Stroke  
(Gently Pressed Down About  $\frac{1}{4}$  Inch)

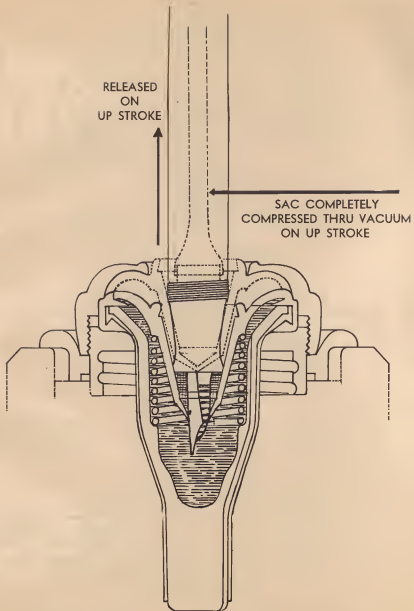

STRONG, FORCEFUL  
SUCTION, VACUUM  
CLEANS NIB OF ALL  
INCRUSTATIONS  
AND SEDIMENT

PREVENTS LEAKING PENS

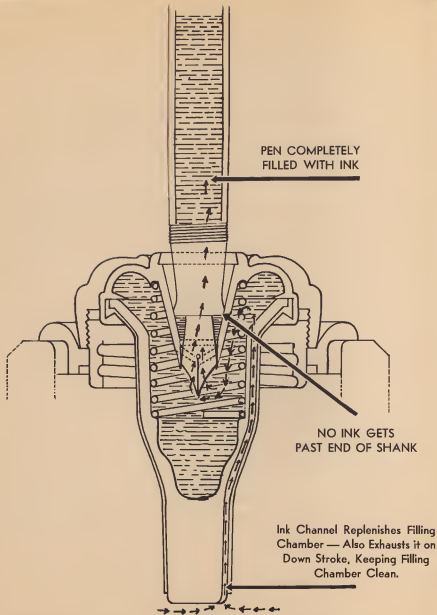

INK TAKEN FROM  
HIGH CONCAVE SURFACE

SEDIMENT  
SETTLES AROUND LOWER  
EDGE — SEE "FOURTH"

THIRD—Pen released, Penfiller evacuating air completely.

**FOURTH** — Atmospheric pressure forces ink into pen, filling more completely than pen's own mechanism.

THE TERRY

*Penfiller*

## SALES DEMONSTRATION DATA

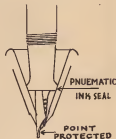

The Terry Penfiller will FILL all sac and vacuum type pens. The sac pen in one easy simple stroke — the vacuum type in three or four repetitions of the filling stroke.

There are two kinds of sac type pens. With the one, where the sac is compressed by a button on the end, the cap covering should be loosened to permit passage of air while filling.

The piston or plunger type pens cannot be filled by the Terry Penfiller without the use of the pen mechanism. But it will do so with perfect protection to the pen point and without getting ink on the pen shank, spilling ink, etc.

The easiest way to demonstrate the Terry Penfiller is with a cut-away pen as illustrated. Insert this pen in the penfiller, slowly pushing it down, depressing the PENFILLER pen seat about one quarter inch, then let go. The Terry Penfiller does the rest. The fountain pen sac will collapse on the return (up) stroke instantly followed by the vacuum released and the sac fills with ink in four or five seconds. NOTE — Be sure and turn the sac in relation to the opening so it will show the complete collapse of the sac "edge view" as illustrated. (The Pearl Barreled cut-away demonstrating fountain pens complete are supplied at 25c each.)

### THE TERRY PENFILLER A PERFECT INKWELL

"Seals with the pen in — seals with the pen out."

In addition to being the last word in fountain pen filling, the Terry Penfiller is the perfect inkwell for "dip pens."

A complete unit — a pen dip for any pen — doubly self-sealing — seals with the pen in — seals with the pen out — non-spillable — non-evaporating — pays for itself in ink saving. The most complete and satisfactory inkwell on the market.

A double value —

A perfected penfiller and a perfected inkwell.

The Terry Penfiller fills the pen more completely than the pen's own mechanism. Eliminates sucking in of air, preventing a higher pressure of air above the ink, eliminating leaking and blotting at first writing. Fills at atmospheric pressure only. Vacuum cleans and flushes the nib removing all incrustations and sediment keeping the pen clean and free flowing, in perfect writing condition at all times.

"Made to serve a lifetime of convenience"
